ENGLISH (Q. 1-40)

DIRECTION: Ques. (1 -6)

Read the paragraph and answer the below given questions.

Today, the import duty on a complete machine is 35% for all practical purposes, whereas the import duty on the raw materials and components ranges from 40%-85%. The story does not end here. After paying such high duties on components, once a machine is made; it is subject to excise duty from 5% - 10%. At the time of sale, the machine tools are subject to further taxation, i.e., Central sales tax or State sales taxes which range from 4% - 16%. This is much for the tax angle. Another factor which pushes to cost of manufacture of machine tools is the very high rate of interest payable the banks ranging up to 22%, as against 4% - 7% prevailing in other advanced countries.

The machine tool industry in India has an enviable record of very quick technology absorption, assimilation and development. There are a number of success stories about how machine tool builders were of help at the most critical times. It will be a pity, in fact a tragedy, if we allow this industry to die and disappear from the scene.

It may be noted that India is at least 6000 km away from any dependable source of supply of machine bob. The Government of India has always given a great deal of importance to the development of small scale and medium scale industries. This industry has also performed pretty well. Today, they are in need of help from India's machine tool industry to enable them to produce quality components at reduced costs. It is anybody's case that the need of this fragile sector will be met from a distance of 6000 km ?

Then, what is it that the industry expects from the Government? It wants a level playing field. $$\text{Larger number} = (23 \times 14) = 322.$$

191. (D) 91 is divisible by 7. So, it is not a prime number.

192. (A) $1397 \times 1397 = (1397)^2$

$$\begin{aligned} &= (1400 - 3)^2 \\ &= (1400)^2 + (3)^2 - (2 \times 1400 \times 3) \\ &= 1960000 + 9 - 8400 \\ &= 1960009 - 8400 \\ &= 1951609. \end{aligned}$$

193. (C) Each of the numbers except 14 is an odd number.

The number '14' is the only EVEN number.

194. (B) The pattern is $2^3, 3^3, 4^3, 5^3, 6^3, 7^3$. But, 100 is not a perfect cube.

195. (B) Let the total profit be Rs. 100.

After paying to charity, A's share = Rs.

$$\left(95 \times \frac{3}{5}\right) = \text{Rs. } 57.$$

If A's share is Rs. 57, total profit = Rs. 100.

$$\text{If A's share Rs. } 855, \text{ total profit} = \frac{100 \times 855}{57} = 1500$$

196. (A) $2ab = (a^2 + b^2) - (a - b)^2$

$$= 29 - 9 = 20$$

$$\Rightarrow ab = 10.$$

197. (B) Speed = $\frac{600}{5 \times 60}$ m/sec.

$$= 2 \text{ m/sec.}$$

Converting m/sec to km/hr

$$= 2 \times \frac{18}{5} \text{ km/hr}$$

$$= 7.2 \text{ km/hr.}$$

198. (B) Let rate = R% and time = R years.

$$\text{Then } \frac{1200 \times R \times R}{100} = 432$$

$$\Rightarrow 12R^2 = 432$$

$$\Rightarrow R^2 = 36$$

$$\Rightarrow R = 6.$$

199. (D) Let number of notes of each denomination be x.

$$\text{Then } x + 5x + 10x = 480$$

$$\Rightarrow 16x = 480$$

$$\therefore x = 30.$$

$$\text{Hence, total number of notes} = 3x = 90.$$

200: (C) Let the number of students in rooms A and B be x and y respectively.

$$\text{Then, } x - 10 = y + 10 \Rightarrow x - y = 20 \dots (i)$$

$$\text{and } x + 20 = 2(y - 20) \Rightarrow x - 2y = -60 \dots (ii)$$

Solving (i) and (ii) we get: $x = 100$, $y = 80$.

∴ The required answer A = 100.
