CSIR UGC NET MATHEMATICAL SCIENCE – MOCK TEST PAPER

- This paper contains 60 Multiple Choice Questions
- Part A 15, part B 25 and part C 20
- Each question in Part 'A' carries two marks
- Part 'B' carries 3 marks
- Part 'C' carries 4.75 marks respectively
- There will be negative marking @ 0.5 marks in Part A, 0.75 marks in Part B, for each wrong answer.
- Pattern of questions : MCQs
- Total marks : 200
- Duration of test : 3 Hours

PART A(1-15)

Average yield of a product in different years is shown in the histogram. If the vertical bars indicate variability during the year, then during which year was the percent variability over the average of that year the least?

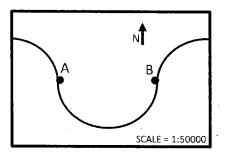

- (1) 2000
- (2) 2001
- (3) 2002
- (4) 2003
- A rectangular sheet ABCD is folded in such a way that vertex A meets vertex C, thereby forming a line PQ.
 Assuming AB = 3 and BC = 4, find PQ. Note that AP = PC and AQ = QC.

- 3. Density of a rice grain is 1.5 g/cc and bulk density of rice heap is 0.80 g/cc. If a 1 litre container is completely filled with rice, what will be the approximate volume of pore space in the container?
 - (1) 350 cc
 - (2) 465 cc
 - (3) 550 cc
 - (4) 665 cc
- 4. A peacock perched on the top of a 12 m high tree spots a snake moving towards its hole at the base of the tree from a distance equal to thrice the height of the tree. The peacock flies towards the snake in a straight line and they both move at the same speed. At what distance from the base of the tree will the peacock catch the snake?
 - (1) 16 m
 - (2) 18 m
 - (3) 14 m
 - (4) 12 m
- 5. The map given below shows a meandering river following a semi-circular path, along which two villages are located at A and B. The distance between A and B along the east-west direction in the map is 7 cm. What is the length of the river between A and B in the ground?

(1) 1.1 km

(2) 3.5 km

(4)
$$T(x_1, x_2) = (x_1 - x_2, 0)$$

47.

 $\Sigma u_n(\mathbf{x})$

- (1) discontinuous
- (2) non-uniformly convergent
- (3) continuous
- (4) can be integrated term by term
- **48.** If f(z) is analytic in any domain D any function g(z) defined as $g(z) = \overline{f}(\overline{z})$ is

 $\Sigma u_n(x)$ is a series of real valued functions defined as $u_1(x) = x$

- (1) analytic everywhere
- (2) analytic in D
- (3) analytic in $D^* = {z : \overline{z} \in D}$
- (4) if f'(z) = 0 in D then f(z) is free from z

49. If f(z) is integrable along a curve c having finite length ℓ and if there exists a positive number M such that

 $|f(z)| \le M$ on c then

(1)
$$\left|\int_{c} f(z) dz\right| = \text{constant}$$

(2)
$$\left|\int_{c} f(z) dz\right| = 0$$

(3) $\left|\int_{c} f(z) dz\right| \leq \ell M$

(4)
$$\left|\int_{c} f(z) dz\right| < \infty$$

$$Z_{5}[z]$$

50.
$$\overline{\langle x^2 + 2x + 2 \rangle}$$
 is

- (1) A field having 32 elements
- (2) a field having 25 elements
- (3) a field having exactly 2 subfields

(4) isomorphic to
$$\frac{Z_5[z]}{\langle x^2 - 2x + 15 \rangle}$$

51. Let
$$P(x) \in \mathbb{R}[x]$$
 then $\overline{\langle P(x) \rangle_{>}}$ be a field if ,
(1) $P(x) = x^{2}+1$
(2) $P(x) = x^{2}+1$
(3) $P(x) = x^{3}-x^{2}+x-1$
(4) $P(x) = x^{2}+x+1$
52. If $P_{3}(x) = x^{3} - 5x^{2} + 17x - 3$ be on three degree polynomial
then if $\frac{\delta - \max_{max}}{m_{max}} = \frac{P_{1}(x) - P_{2}(x)}{|x||}$
where $P_{2}(x)$ is second degree polynomial
Then
(1) $\delta = 2$
(2) for $x = 0, 1, 4; \delta = 2$
(3) for $x = 3, \delta = \text{does not exist},$
(4) for $x = 0, \delta = 2$
53. Let $A = [a_{ij}]_{n \times n}$ be a matrix such that rows and columns of A forms an orthonormal set
Then possible cases/case is
(1) $a_{ij} \in C$ and A is unitary
(2) $a_{ij} \in R$ and A is orthogonal
(3) aij $\in C$ and A is unitary
(2) $a_{ij} \in R$ and A is orthogonal
(4) $a_{ij} \in R$ and A is unitary
54. The Given differential equation

$$\begin{bmatrix} \frac{d}{ax}(\frac{x}{ax}) - \frac{x^{2}}{x^{2}} \end{bmatrix}^{u=0}$$
with $u(0) = 0$ and $u(1) = 0$ have
(1) Linearly independent solution
(2) Green function defined on it
(3) $W[u_{1}(x), u_{2}(x)] = 0$
(4) $G(x, \xi) = 0 \forall x$

$$\int_{0}^{1/2} (y^2 - y^2 + 2xy) dy$$
 with $y(0) = 0$ and $\frac{y(\frac{\pi}{2}) = 0}{(\frac{\pi}{2})}$ is extremized by
(1) $y^n + y = x$
(2) $y = x + \sin x + \frac{\pi}{2} \cos x$
(3) $y = x - \frac{\pi}{2} \sin x$
(4) $y^n - y = x^2$
56. $\int_{0}^{1} \int_{0}^{1} \int_{0}^{1/2} (x - 1)^{2^n} dt$
(2) $\frac{1}{(n-1)!} \int_{n}^{1/2} (x - 1)^{n-1} dt$
(3) $\frac{1}{(n-1)!} \int_{n}^{1/2} (x - 1)^{n-1} dt$
(4) $\frac{1}{(n-1)!} \int_{-\infty}^{1/2} (x - 1)^{n-1} dt$
(57. If $f(1)_{n=1}^{1/2}$ is a sequence of measurable functions
Then-
(1) $\frac{\sup_{n=1}^{1/2} f_{n}}$ is measurable
(2) $\frac{1^{n+1}}{2}$ is measurable
(3) if $\frac{1}{(1-\frac{1}{2})} c_{n}(x - 1)^{n-1} dt$
(4) if $\frac{1}{2} \frac{1}{n-2}$ converges pointwise to f on [a, b] then f is measurable
(4) if $\frac{1}{2} \frac{1}{n} c_{n}(x) = f(x)$ then f is measurable.
58. X_{n} and Y_{n} be two sequences of random variable Then-
(1) X_{n} converges to X in probability then X_{n} converges to X in distribution
(2) If X_{n} converges to X in probability then X_{n} converges in probability to 0 then $X_{n} + Y_{n}$ converges to X in distribution then $x_{n} + Y_{n} = 0$ converges to X in Y_{n} distribution Y_{n} converges to X in Y_{n} converges X in distribution and Y_{n} converges in probability to 0 then $X_{n} + Y_{n}$ converges to X in Y_{n} converges X in distribution and Y_{n} converges in probability to 0 then $X_{n} + Y_{n}$ converges to X in Y_{n} converges to X in

Now;

5 gm is added additionally

i.e., 105 gm of coffee \rightarrow 15 gm of chicory

$$\% = \frac{15}{105} \times 100 = \frac{100}{7} = 14.2\% \square 14\%$$

14.(4) Raw material and Research & Development have registered increase by same percentage.

Increase in raw material from 2010 to 2011 = 6240-5200 = 1040

Percent increase = (1040/6240) x 100 = 16.6 %

Increase in Research & Development from 2010 to 2011

= 26400 - 22000 = 4400

Percent increase = (4400/26400) x 100 = 16.6 %

15.(3) The formula used in this operation is as follows :

So next one is TVXZ

PART B(16-40)

16.(1)
$$\overline{X}$$
 for population A = $\frac{101+102+...+200}{100} = \frac{\frac{100}{2}[101+200]}{100} = 150.5$
for population B = $\frac{151+152+...+250}{100} = \frac{\frac{100}{2}[151+250]}{100}200.5$
 $V_{A} = \frac{(101-150.5)^{2} + (102-150.5)^{2} + + (200-1505)^{2}}{100}$
 $= \frac{(49.5)^{2} + (48.5)^{2} + ... + (0.5)^{2} + (0.5)^{2} + (1.5)^{2} + ... + (49.5)^{2}}{100}$
 $V_{B} = \frac{(151-200.5)^{2} + ... + (250-200.5)^{2}}{100} = \frac{(49.5)^{2} + ... + (0.5)^{2} + (0.5)^{2} + ... + (49.5)^{2}}{100}$
 $\downarrow_{B} = \frac{V_{A}}{V_{B}} = 1$

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

17. (3) Since $Y_1 < Y_2 < Y_3 < Y_4$ denote the order statistics of a random sample of size 4 from a distribution having pdf

$$f(x) = \begin{cases} 2x & 0 < x < 1 \\ 0 & elsewhere \end{cases}$$

 $\left(\frac{1}{2} < Y_3\right)$ We express the pdf of $\mathsf{Y}_3^{}$ in terms of $\mathsf{f}(x)$ and $\mathsf{F}(x)$ and then compute P

Here
$$F(x) = x^2$$
, provided that $0 < x < 1$, so that

$$g_{3}(y_{3}) = \begin{cases} \frac{4!}{2! \, 1!} (y_{3}^{2})^{2} (1 - y_{3}^{2}) (2y_{3}) & 0 < y_{3} < 1\\ 0 & \text{elsewhere.} \end{cases}$$

Thus

$$P^{\left(\frac{1}{2} < Y_{3}\right)} = \int_{1/2}^{\infty} g_{3}(y_{3}) dy_{3}$$
$$= \int_{1/2}^{1} 24(y_{3}^{5} - y_{3}^{5}) dy_{3} = \frac{243}{256}$$

18. (4) (i) Since S and T are 1-1 onto, S^{-1} and T^{-1} exist.

Let
$$ST(x) = ST(y)$$

Then $S(T(x)) = S(T(y))$
 $\Rightarrow T(x) = T(y)$ as S is 1-1
 $\Rightarrow x = y$ as T is 1-1 onto
 \Rightarrow ST is 1-1 onto

Again ST : V \rightarrow U, let u \in U be any element then as S is in onto, $\exists w \in W \text{ s.t.}$, S(w) = u and as T : V \rightarrow W is onto $\exists v \in V$ s.t., $\tau(v) = w$

$$V = W$$

Now $T(v) = w \Rightarrow S(T(v)) = S(w) \Rightarrow ST(v) = u$

or that ST is onto.

Also

$$(ST) (T^{-1} S^{-1}) = S(T(T^{-1}S^{-1}) = S(TT^{-1})S^{-1} = S(IS^{-1}) = SS^{-1} = I$$

Toll Free : 1800-2000-092 Email : info@vpmclasses.com Portal :examprep.vpmclasses.com

Online Test : onlinetest.vpmclasses.com

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

Similarly
$$(T^{-1} S^{-1}) (ST) = T^{-1} (S^{-1}(ST)) = T^{-1} (S^{-1}S) T = T^{-1} (TT) = T^{-1} T = T$$

Showing that $(ST)^{-1} = T^{-1}S^{-1}$.
(ii) Let $v \in Ker T$ be any element
Then $T(v) = 0$
 $\Rightarrow S(T(v)) = S(0)$
 $\Rightarrow ST(v) = 0$
 $\Rightarrow v \in Ker ST$ and $Ker ST = (0)$ as ST is 1-1
 $\Rightarrow v = 0 \Rightarrow Ker T = (0) \Rightarrow T$ is 1-1 onto.
(iii) Let $u \in U$ be any element. Since $ST : V \rightarrow U$ is onto, \exists some $v \in V$ s.t., $ST(v) = u$
i.e., $S(T(v)) = u$
Let $T(v) = w$ and $w \in W$ such that
 $S(w) = u$
Then S is onto.
19. (2) Since $Z_1 = 3 - 4i, Z_2 = -4 + 3i$
and if angle between them is θ given by
 $\cos \theta = \frac{Z_1 \cdot Z_2}{|Z_1||Z_2|}$
 $Z_1 \cdot Z_2 = Re \{\overline{Z}, Z_2\} = Re\{(3 + 4i) (-4 + 3i)\} = Re\{-24 - 7i\} = -24$
 $\cos \theta = \frac{-24}{|3 - 4i||-4 + 3i|} = \frac{-24}{25} = -0.96$
 $\theta = \cos^{-1}(-0.96)$
 $= \pi - \cos^{-1}(0.96)$

Т

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

$$C(0, 1) \xrightarrow{C_3} B(1, 1)$$

$$C_4 \xrightarrow{C_1} A(1, 0) \xrightarrow{X} B(1, 1)$$

$$C_4 \xrightarrow{C_1} A(1, 0) \xrightarrow{X} B(1, 1)$$
Here $I = \int_0^A x \, dz + \int_A^B x \, dz + \int_B^C x \, dz + \int_C^0 x \, dz$
along OA = x = (1 - t).0 + t.1 = t
along AB = x = (1 - t).0 + t.1 = t
along BC = x = (1 - t).1 + t(1 + i) = 1 + ti
along BC = x = (1 - t). (1 + i) + t.1 = 1 - t + i
along OC = x = (1 - t). i + t.0 = (1 - t)i
So $I = \int_0^1 t \, dt + \int_0^1 1.t \, dt + \int_0^1 (1 - t)(-1) \, dt + 0$

$$= \frac{1}{2} + i - \frac{1}{2} + 0$$

$$= i$$

21. (4) Statement A and B are true as if

$$T(z) = \frac{ax + b}{cz + d}$$
 (a, b, c, d \in c ad $-bc \neq 0$)

be linear transformation.

$$\begin{aligned} w &= \frac{az+b}{cz+d} & \left(z \neq -\frac{d}{c}\right) \\ \text{it gives } z &= T^{-1}(w) \xrightarrow{\frac{dw-b}{-cw+a}} \left(w \neq \frac{a}{c}\right) \\ \text{where } da &= (-b) (-c) = ad - bc \neq 0 \\ \text{inverse of bilinear transformation is again a bilinear transformation.} \\ again take & s(z) = \frac{a'z+b'}{c'z+d'} \text{ another } (\text{where } a'd' - b'c' \neq 0) \end{aligned}$$

Т

c' ^{≠ 0})

bilinear transformation.

Toll Free : 1800-2000-092 Email : info@vpmclasses.com Portal :examprep.vpmclasses.com

Online Test : onlinetest.vpmclasses.com

Mobile: 9001297111, 9829619614 Website : www.vpmclasses.com Store : store.vpmclasses.com 31

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

$$= \frac{a\left(\frac{a'z+b'}{c'z+d'}\right)+b}{c\left(\frac{a'z+b'}{c'z+d'}\right)+d} = \frac{(aa'+bc')z+ab'+bd'}{(ca'+dc')z+cb'+dd'}$$
(To S)(z) = T(S(z))

it is a bilinear transformation given by $(ad - bc) (a'd' - b'c') \neq 0$

(3) if a bilinear transformation fixes 1 i.e.

T(1) = 1

 $\frac{a+b}{c+d} = 1$

so that a = d b = c

we conclude that T is identity map

(4) A bilinear mapping maps circles and straight lines in the z-plane into circles or lines.

22.(C) Since $f(-1) = f(1) = 2^{35}$

i.e. two real no. -1 and 1 have the same image so, the function is not one-one and let

$$y = (x^{2}+1)^{35}$$
$$x = \sqrt{y^{\frac{1}{35}} - 1}$$

Thus every real no. has no pre-image. So, the function is not on to.

Hence function is neither one-one nor onto.

23.(1) Let given equation is as

$$\begin{aligned} & \frac{\partial f}{\partial x} = 0, \frac{\partial f}{\partial y} = 0, \frac{\partial f}{\partial z} = 0\\ & \frac{\partial f}{\partial p} = -6p, \frac{\partial f}{\partial q} = 1 \end{aligned}$$

put these value in Charpit subsidiary equation

$$\frac{dp}{\frac{\partial f}{\partial x} + p\frac{\partial f}{\partial z}} = \frac{dq}{\frac{\partial f}{\partial y} + q\frac{\partial f}{\partial z}} = \frac{dz}{-p\frac{\partial f}{\partial p} - q\frac{\partial f}{\partial p} - q\frac{\partial f}{\partial p}} = \frac{dy}{-\frac{\partial f}{\partial q}}$$

IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

and for n = 2 $2^n - 1 = again a prime$

26.(4) Ring of order 1 being the zero ring is commutative and ring of order 2 and 3 are of prime order

so can prove here that rings of prime order is commutative

Let the order of ring be p(prime number)

Then $\langle R, + \rangle$ is cyclic group Let $\langle R, + \rangle = \langle a \rangle$ then o(1) = o(R) = p

Let $x, y \in R$ be any elements then x = na y = ma for some integer n, m

Now xy = (na) (ma) = nma² = (ma) (na) =
$$y^{x}$$

 \Rightarrow R is commutative.

Now we can take an example of ring of order 4

Let R be the set of 2×2 matrices

 $\left\{ \begin{bmatrix} 0 & 0 \\ 0 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 1 \\ 0 & 0 \end{bmatrix}, \begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix}, \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix} \right\}$

$$^{|}$$
 over Z $_2$ with second row having zero entries Then R is a ring under matrix

and $\begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} 0 & 1 \\ 0 & 0 \end{bmatrix} = \begin{bmatrix} 0 & 1 \\ 0 & 0 \end{bmatrix}$

addition and matrix multiplication

 $\begin{bmatrix} 0 & 1 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix} = \begin{bmatrix} 0 & 0 \\ 0 & 0 \end{bmatrix}$

since

we find R is non commutative and also it has order 4

27. (1) Here we have

$$\begin{aligned} x_0 &= 0, \ x_1 = 4, \\ y_0 &= f(x_0) = 0, \\ y_0^1 &= f'(x_0) = 1, \end{aligned} \qquad \begin{array}{l} y_1 &= f(x_1) = 2 \\ y_1^1 &= f'(x) = 0 \end{aligned}$$

The Hermite's interpolating polynomial is given by

 $V_{i}(x) = (x - x_{i})\ell_{i}^{2}(x)$

$$\phi(\mathbf{x}) = \sum_{i=0}^{x} u_i(\mathbf{x}) y_i + \sum_{i=0}^{1} v_i(\mathbf{x}) y_i^{1} \qquad \dots (1)$$

where

and

we have

$$u_0(x) = [1 - 2(x - x_0)^{\ell_0^1} (x_0)]^{\ell_0^2(x)}$$

 $u_{i}(x) = [1 - 2(x - x_{i})\ell_{i}^{1}(x_{i})]\ell_{i}^{2}(x)$

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

$$= \left[1 - 2(x - 0)\ell_0^1(0)\right]\ell_0^2(x)$$

 $\ell_0(\mathbf{x}) = \frac{\mathbf{x} - \mathbf{x}_1}{\mathbf{x}_0 - \mathbf{x}_1} = \frac{\mathbf{x} - 4}{0 - 4} = \frac{\mathbf{x} - 4}{-4}$

Since

and

=

 $u_{0}(x) = \left[1 - 2x\left(-\frac{1}{4}\right)\right]\left(\frac{x - 4}{16}\right) = \left(1 + \frac{x}{2}\right)\frac{(x - 4)^{2}}{16}$

We obtain

$$=\frac{1}{32}(x+2)(x-4)^2$$

 $\ell_0^1(\mathbf{x}) = -\frac{1}{4}$

Also we have

$$u_{1}(x) = \begin{bmatrix} 1 - 2(x - x_{1})\ell_{1}^{1}(x) \end{bmatrix} \ell_{1}^{2}(x) = \begin{bmatrix} 1 - 2(x - 4)\ell_{1}^{1}(x) \end{bmatrix} \ell_{1}^{2}(x)$$
$$\ell_{1}(x) = \frac{x - x_{0}}{x_{1} - x_{0}} = \frac{x - 0}{4 - 0} = \frac{x}{4}$$

Since

and

$$u_1(x) = \left[1 - 2(x - 4)\frac{1}{4}\right] \left(\frac{x^2}{16}\right) = \left(\frac{6 - x}{2}\right) \frac{x^2}{16} = \frac{x^2(6 - x)}{32}$$

We can write

Similarly, we have $v_0(x) = (x - x_0)\ell_0^2(x)$

 $\ell_1^1(\mathbf{x}) = \frac{1}{4}$

$$=(x-0)=\frac{(x-4)^2}{16}=\frac{x(x-4)^2}{16}$$

and $v_1(x) = (x - x_1)^{\ell_1^2(x) = (x - 4)\frac{x^2}{16}}$

The Hermite's polynomial is

$$\phi(\mathbf{x}) = u_0 y_0 + u_1 y_1 + v_0^{1} + v_1 y_1^{1}$$
$$= u_0 \cdot 0 + 2u_1 + 1 \cdot v_0 + 0 \cdot v_1$$
$$= 2u_1 + v_1$$

Toll Free : 1800-2000-092 Email : info@vpmclasses.com Portal :examprep.vpmclasses.com

Online Test : onlinetest.vpmclasses.com

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

$$= 2\left[\frac{x^{2}(6-x)}{32}\right] + \frac{x(x-4)^{2}}{16}$$
$$= \frac{1}{16} \frac{1}{[6x^{2}-x^{3}+x^{3}+16x-8x^{2}]}$$
$$= \frac{1}{16}(16x-2x^{2}) = \frac{1}{8}(8x-x^{2})$$

Hence the required Hermite's polynomial is $\frac{1}{8} \left(8x - x^2 \right)$

28. (1) Given functional
$$I = \int_{0}^{\frac{\pi}{2}} (y'^{2} - y^{2} - 4y \sin^{2} x) dx$$

$$f(x, y, y') = y'^2 - y^2 - 4y \sin^2 x$$

for extremal

$$\frac{\partial f}{\partial y} - \frac{d}{dx} \left(\frac{\partial f}{\partial y'} \right) = 0$$

$$-2y - 4\sin^2 x - \frac{d}{dx} (2y') = 0$$

$$-y - 2\sin 2x - y'' = 0$$

$$y'' + y = -2\sin^2 x$$

$$CF = C_1 \cos x + C_2 \sin x$$

$$P.I. = \frac{1}{D^2 + 1} 2\sin^2 x$$

$$= \frac{1}{D^2 + 1} [1 - \cos 2x]$$

$$= -\left(1 + \frac{1}{3}\cos 2x\right)$$

so $y = c_1 \cos x + c_2 \sin x - 1$
$$-\frac{1}{3}\cos 2x$$

$$y(0) = \frac{1}{3} \Rightarrow c_1 - 1 - \frac{1}{3} \Rightarrow c_1 = -\frac{4}{3}$$

- $\Rightarrow 1 = 0$, a contradiction
- ∴ T has no eigen value.

 $\left(z + \frac{1}{z}\right)$ is analytic function everywhere at $z = 0 \ \phi 1$

This function is analytic in the annulus $r \le |z| \le R$, r<R. The laurent series expansion of this function in the r < |z| < R

annulus
$$\left| \frac{1}{z} \right| = \frac{1}{2} \sum_{n=1}^{\infty} a_n z^n$$

$$a_n = \frac{1}{2\pi i} \int \cosh\left(z + \frac{1}{z}\right) \frac{dz}{z^{n+1}}$$

where
$$2\pi i r_{r} = (-2)^{2}$$

where r is a circle, $|z| = r_{1} = r_{1} = (r < r_{1} < R)$
Let $r_{1}=1$, then $|z|=1$ and $z = e^{i\theta}$
 $\Rightarrow dz = ie^{i\theta} d\theta$
 $a_{n} = \frac{1}{2\pi i} \int_{0}^{2\pi} \cosh\left(e^{i\theta} + \frac{1}{e^{i\theta}}\right) \frac{ie^{i\theta} d\theta}{e^{i\theta(n+1)}}$
 $= \frac{i}{2\pi i} \int_{0}^{2\pi} \cosh(2\cos\theta) e^{-in\theta} d\theta$
 $= \frac{1}{2\pi} \int_{0}^{2\pi} \cosh(2\cos\theta) (\cos n\theta - i\sin n\theta) d\theta$
 $= \frac{1}{2\pi} \int_{0}^{2\pi} \cosh(2\cos\theta) \cosh \theta - \frac{i}{2\pi} \int_{0}^{2\pi} \cosh(2\cos\theta) \sin n\theta d\theta$

Т

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

$$=\frac{1}{2\pi}\int_{0}^{2\pi}\cosh(2\cos\theta)\cos n\theta d\theta \qquad \begin{pmatrix} \therefore \int_{0}^{2\pi}f(\theta)=0\\ if(2\pi-\theta)=-f(\theta) \end{pmatrix}$$

$$=\frac{1}{2\pi}\int_{0}^{2\pi}\cosh(2\cos\theta)\cos(-n\theta)d\theta = a_{-n}$$
$$\cosh\left(z+\frac{1}{z}\right)$$

Also,

$$=\sum_{-\infty}^{\infty}a_{n}z^{n} = a_{0} + \sum_{n=1}^{\infty}a_{-n}z^{-n} + \sum_{n=1}^{\infty}a_{n}z^{n}$$
$$= a_{0} + \sum_{n=1}^{\infty}a_{n}\left(z^{n} + \frac{1}{z^{n}}\right)$$
$$\cosh\left(z + \frac{1}{z}\right) = a_{0} + \sum_{n=1}^{\infty}\left(z^{n} + \frac{1}{z^{n}}\right)a_{n}$$

Thus

$$a_{n} = \frac{1}{2\pi} \int_{0}^{2\pi} \cosh(2\cos\theta) \cosh\theta d\theta$$

Where

31.(3) Let n be the number of students and p the probability for any student to need copy of a particular testbook from the university library.

Mean :

$$X = np = 600 \times .5 = 30$$

$$\sigma = \sqrt{npq} = \sqrt{600 \times .05 \times .95} = 5.34$$

Let x_1 represent the number of copies of a textbook required on any day. We want x_1 such that P (X < z_1) >

0.9 or P (Z (
$$z_1$$
) > 0.90

$$\left(z_1 = \frac{x_1 - 30}{5.34}\right)$$

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

$$= \lim_{n \to \infty} 4^{\left(1 + \frac{1}{n}\right)^{2/4}} = 4^{1/4} = 2^{1/2} = \sqrt{2}$$

33.(4) We have
$$g'(x) = 2f'\left(\frac{x}{2}\right) \cdot \frac{1}{2} + f'(2-x)(-1)$$

$$= f'\left(\frac{x}{2}\right) - f'(2-x)$$

Given
$$f''(x) < 0 \forall x \in (0,2)$$

So f'(x) is decreases in (0,2)

$$\frac{x}{2} > 2 - x \Longrightarrow f'\left(\frac{x}{2}\right) < f'(2 - x)$$

Thus
$$f'\left(\frac{x}{2}\right) - f'(2-x) < 0$$

$$\Rightarrow g'(x) < 0, \quad \forall \frac{x}{2} > 2 - x$$
$$\Rightarrow x > \frac{4}{3}$$
g decreasing in $\left(\frac{4}{3}, 2\right)$ and increasing in $\left(0, \frac{4}{3}\right)$

34. (3) Divergence Criteria If a sequence $X = (x_n)$ of real numbers has either of the following

properties, then X is divergent.

(i) X has two convergent subsequence X' = ($^{X_{n_k}}$) and X" = ($^{X_{r_k}}$) whose limits are not equal.

(ii) X is unbounded.

35. (3) If f is differentiable on I, the well know the implies that f continuous on I, and by the Continuous Inverse Theorem the inverse function g is continuous on J.

i.g. g' =
$$\frac{1}{f' \circ g}$$

Т

36. (1) The given equation may be written as

$$g(x) = 2 \lambda x \int_{0}^{1} t g(t) dt - 4\lambda x^{2} \int_{0}^{1} g(t) dt \qquad ...(1)$$

or $g(x) = 2\lambda x c_{1} - 4\lambda x^{2} c_{2} \qquad ...(2)$
where $c_{1} = \int_{0}^{1} t g(t) dt \qquad ...(3)$

and
$$c_2 = \int_0^1 g(t) dt$$
 ...(4)

Using (2), (3) becomes

$$c_{1} = \int_{0}^{t} t(2\lambda c_{1}t - 4\lambda c_{2}t^{2}) dt$$

$$c_{1} = \begin{bmatrix} 1 - 2\lambda \int_{0}^{1} t^{2} dt \end{bmatrix} + 4\lambda c_{2} \int_{0}^{1} t^{3} dt = 0$$
or,
$$c_{1} \begin{pmatrix} 1 - \frac{2\lambda}{3} \end{pmatrix} + \lambda c_{2} = 0$$
...(5)

Again using (2), (4) becomes

$$c_{2} = \int_{0}^{1} (2\lambda_{1}ct - 4\lambda c_{2}t^{2})dt$$

or, $2\lambda c_{1} \int_{0}^{1} dt - c_{2} \left[1 + 4\lambda \int_{0}^{1} t^{2} dt \right] = 0$
or, $\lambda c_{1} - c_{2} \left[1 + \frac{4\lambda}{3} \right] = 0$...(6)

For non zero solution of equations (5) and (6), we must have

$$\begin{vmatrix} 1 - \frac{2\lambda}{3} & \lambda \\ +\lambda & -\left[1 + \frac{4\lambda}{3}\right] \end{vmatrix} = 0$$

or,
$$-\left(1 - \frac{2\lambda}{3}\right)\left(1 + \frac{4\lambda}{3}\right) - \lambda^{2} = 0$$

or,
$$-1 - \frac{2\lambda}{3} + \frac{8\lambda^2}{9} - \lambda^2 = 0$$

or, $\lambda^2 + 6\lambda + 9 = 0$
37. (3) Here $f(x) = x, \lambda = 1, k(x, t) = 1$...(1)
We know that $k_1(x, t) = k(x, t) = 1$...(2)
The nth iterated kernal is given by
 $k_n(x, t) = \int_0^{1/2} k(x, z)k_{n-1}(z, t)dz$...(3)
On putting $n = 2 \sin (3)$, we have
 $k_2(x, t) = \int_0^{1/2} 1dz$ [using (2)]
or $k_2(x, t) = [z]_0^{1/2} = \frac{1}{2}$...(4)
Again putting $n = 3$ in (3), we have
 $k_3(x, t) = \int_0^{1/2} k(x, z)k_2(z, t)dz$
 $= \int_0^{1/2} \frac{1}{2}dz$ [using (2) and (4)]
 $k_3(x, t) = \frac{(\frac{1}{2})^2}{12}$...(5)

and so on repeating the above process, we have in general

$$k_{n}(x, t) = \left(\frac{1}{2}\right)^{n-1}$$
 ...(6)

The resolvent kernal $R(x, t; \lambda)$ is given by

$$\mathsf{R}(\mathsf{x},\,\mathsf{t};\,\lambda) \quad = \; \sum_{n=1}^{\infty} \lambda^{n-1} \mathsf{k}_n(\mathsf{x},\mathsf{t}) \;$$

$$2\left[\frac{\varepsilon_{n}^{2}}{2!}f^{"}(a)+...\right]$$

$$\varepsilon_{n+1} = \varepsilon_{n} - \frac{\left[\varepsilon_{n}f^{n}(a) + \frac{\varepsilon_{n}^{2}}{2!}f^{"}(a) + ...\right]}{\left[\varepsilon_{n}f^{n}(a) + \frac{1}{3!}\varepsilon_{n}f^{"'}(a) + ...\right]}$$

$$= \varepsilon_{n} - \frac{2\varepsilon_{n}\left[\frac{1}{2!}f^{"}(a) + \frac{1}{3!}\varepsilon_{n}f^{"'}(a) + ...\right]}{\left[f^{"}(a) + \frac{\varepsilon_{n}}{2!}f^{"'}(a)\right]}$$

$$= \varepsilon_{n} - \frac{2\varepsilon_{n}\left[\frac{1}{2!}f^{"}(a) + \frac{1}{3!}\varepsilon_{n}f^{"'}(a)\right]}{\left[f^{"}(a) + \frac{\varepsilon_{n}}{2!}f^{"'}(a)\right]}$$

$$\Box \varepsilon_{n} - \frac{2\varepsilon_{n}\left[\frac{1}{2!}f^{"}(a) + \frac{1}{3!}\varepsilon_{n}f^{"'}(a)\right]}{\left[f^{"}(a) + \frac{\varepsilon_{n}}{2!}f^{"'}(a)\right]}$$

$$\Box \frac{1}{6}\varepsilon_{n}^{2} \cdot \frac{f^{"'}(a)}{\left[f^{"}(a) + \frac{\varepsilon_{n}}{2!}f^{"'}(a)\right]}$$

$$\varepsilon_{n+1}^{\approx} \frac{1}{6}\varepsilon_{n}^{2} \cdot \frac{f^{"'}(a)}{\left[f^{"}(a)\right]}$$

which shows that $\epsilon_{n~+~1} \propto {\epsilon_n}^2$ and hence the convergence is quadratic.

$$\Rightarrow$$
 T(\in_1) = 2 $\alpha_1 - i\alpha_2$

Also $T(\in_2) = T(0, 1) = (0, 0) = 0\alpha_1 + 0\alpha_2$

 $\therefore \quad [T]_{\beta \ \beta'} = \begin{bmatrix} 2 & 0 \\ -i & 0 \end{bmatrix}$

PART C(41-60)

41.(1,2,3) Let R_{∞} be the extended set of real numbers (i.e., the set of real numbers including $-\infty$

and $+\infty$).

he function d defined by

$$d(x,y) = |f(x) - f(y)|, \quad \forall \ x, y \in \mathbf{R}_{\alpha}$$

where f(x) is given by

$$f(x) = \begin{cases} \frac{x}{1+|x|}, & \text{when } -\infty < x < \infty \\ 1, & \text{when } x = \infty \\ -1, & \text{when } x = -\infty \end{cases}$$

Show that (\mathbf{R}_{∞} , d) is a bounded metric space.

For the triangle inequality

$$d(x,y) = \left| \frac{x}{1+|x|} - \frac{x}{1+|y|} \right|$$
$$= \left| \frac{x}{1+|x|} - \frac{z}{1+|z|} + \frac{z}{1+|z|} - \frac{y}{1+|y|} \right|$$
$$\leq \left| \frac{x}{1+|x|} - \frac{z}{1+|z|} \right| + \left| \frac{z}{1+|z|} - \frac{y}{1+|y|} \right|$$
$$= d(x, z) + d(z, y), \ x, y, z \in \mathbb{R}$$

If $x = \infty$, $y = -\infty$, then

$$d(x, y) = |1 - (-1)| \leq \left| 1 - \frac{z}{1 + |z|} + \left| \frac{z}{1 + |z|} - (-1) \right| \right|$$

L

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

Similarly when $x = -\infty$, $y + \infty$, then triangle inequality holds.

Hence (\mathbf{R}_{∞} , d) is metric space.

Moveover, if x and y are two elements of \mathbf{R}_{∞} , then

 $-1 \le f(x) \le 1$, and $-1 \le f(y) \le 1$,

 $d(x, y) = |f(x) - f(y)| x, y \in R_{\infty}$

...

Hence $(R_{\infty} d)$ is a bounded metric space.

 $T(z) = \frac{az + b}{cz + d}, ad - bc \neq c$, be any bilinear transformation. 42.(1,2,3,4) Let

$$T(z) = \frac{a}{d}z + \frac{b}{d} = Az + B$$

If c = 0, the

When

 $A = \frac{a}{d}, B = \frac{b}{d}$

Clearly Az+B, being linear, maps circles and lines into circles and lines (a line is a circle wih infinite radius)

If
$$C \neq 0$$
, then

$$T(z) = \frac{a(z+d/c)}{c(z+d/c)} + \frac{b}{cz+d} - \frac{ad}{c(cz+d)}$$

$$= \frac{a}{c} + \frac{bc-ad}{c(cz+d)}$$

$$= \frac{a}{c} + \frac{bc-ad}{c^2} \cdot \frac{1}{z+d/c}$$
Putting

$$z_1 = z + \frac{d}{c}, z_2 = \frac{1}{z_1}$$
bc - ad

$$z_3 = \frac{bc - ad}{c^2} . z_2$$

$$T(z) = \frac{a}{c} + z_3$$

We get

Which is of the form

$$\omega_1 = z + \alpha, \ \omega_2 = \frac{1}{z}, \ \omega_3 = \beta z$$

Which shows that every bilinear transformation is the resultant of bilinear transformation with simple geometric imports. Thus, a bilinear transformation maps circle and lines into circle and lines.

43.(1,2,3) We have

$$\Delta^2 \left(\frac{5x+12}{x^2+5x+6} \right) = \Delta^2 \left(\frac{5x+12}{(x+2)(x+3)} \right)$$
$$= \Delta^2 \left(\frac{2}{x+2} + \frac{3}{x+3} \right)$$

$$= \Delta \left(\Delta \left(\frac{2}{x+2} \right) + \Delta \left(\frac{3}{x+3} \right) \right)$$
$$= \Delta \left[2\Delta \left(\frac{1}{x+2} \right) + 3\Delta \left(\frac{1}{x+3} \right) \right]$$

$$=\Delta\left[2\left(\frac{1}{x+3}-\frac{1}{x+2}\right)+3\left(\frac{1}{x+4}-\frac{1}{x+3}\right)\right]$$

$$=2\Delta\left[\left(\frac{1}{x+3}-\frac{1}{(x+2)}\right)+3\Delta\left(\frac{1}{x+4}-\frac{1}{x+3}\right)\right]$$

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

$$u_{2}(x) = x^{1/3} - x,$$

$$u_{3}(x) = x^{1/5} - x^{1/3},$$

...

$$u_{n}(x) = x^{1/2(2n - 1)} - x^{1/(2n - 3)}.$$

Hence

 $f_n(x) = x^{1/(2n-1)}$.

$$\therefore \quad f(0) = 0$$

and f(0) = 1 for all other values of x.

Hence f is discontinuous at x = 0 and consequently zero is a point of non-uniform convergence of the series.

Now for $0 \le x \le c < \infty$, we have

$$\int_{0}^{c}f(x)dx=\int_{0}^{c}dx=c$$

and
$$\int_{0}^{c} f_{n}(x) dx = \int_{0}^{c} x^{1/(2n-1)} dx$$

$$=\frac{2n-1}{2n}c^{2n/(2n-1)}\rightarrow c as n\rightarrow\infty$$

Hence the series is term by term integrable in the above interval although 0 is a point of nonuniform convergence of the series.

48.(3,4) We have
$$\frac{g(z+h)-g(z)}{h} = \frac{\overline{f}(\overline{z+h}-f(\overline{z}))}{h} = \frac{\overline{f}(\overline{z}+\overline{h})-f(\overline{z})}{h}$$
$$= \left[\overline{\frac{f(\overline{z}+\overline{h})-f(\overline{z})}{\overline{h}}}\right]$$
$$\lim_{h \to 0} g\frac{(z+h)-g(z)}{h} = \lim_{h \to 0} \frac{\overline{f}(\overline{z}+\overline{h})-f(\overline{z})}{\overline{h}}$$
$$= \overline{\left[\lim_{h \to 0} \frac{f(\overline{z}+\overline{h})-f(\overline{z})}{\overline{h}}\right]} = \frac{\overline{df(\overline{z})}}{dz}$$

Т

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

Thus g(z) has a derivative at z and the derivative is equal to the complex conjugate of the

derivative of f at \overline{z} Since this hold for all $z \in D^*$ Thus g is analytic in $D^* = \{z : \overline{z} \in d\}$ if f'(z) = 0 in domain D Since f(z) = u(x, y) + iv(x, y) now f'(z) = 0 \Rightarrow u_x + iv_x = 0 \Rightarrow u_x = 0 = v_x $\forall (x, y) \in D$ By Cauchy riemann equations u_y = v_y = 0 $\forall (x, y) \in D$

so the gradient vector $\nabla_u = (u_x, u_y) = (0, 0)$ is zero

 \Rightarrow directional derivative of u(x, y) is zero in all directions

Hence u(x, y) is constant along a line segment joining two points.

Thus f(z) is free from z

49.(3) By definition we know that

$$\int_{C} f \big(z \big) dz = \lim_{n \to \infty} \ \sum_{j=1}^{n} \ f \big(\xi_{j} \big) \delta z_{j}$$

Now

$$\begin{split} & \left|\sum_{j=1}^{n} f\left(\xi_{j}\right) \delta z_{j}\right| \leq \sum_{j=1}^{n} \left|f\left(\xi_{j}\right)\right| \left|\delta z_{j}\right| \\ & \leq \sum_{j=1}^{n} M \left|\delta z_{j}\right|, \\ & \ddots \left|f\left(z\right)\right| \leq M \end{split}$$

for all points z on C (given)

$$\leq M \sum_{j=1}^{n} \left| \delta z_{j} \right|$$

$$\sum_{j=1}^{n} \left| \delta z_{j} \right|$$

represents the sum of all the chord lengths joining points $z_j - 1$ and z_j , where j =

52.(1,2,4) Here we are given
$$P_3(x) = x^3 - 5x^2 + 17x - 3$$
, ... (i)

where $0 \le x \le 4$

First of all we change the interval from [0, 4] to [-1, 1] by using the transformation

Then
$$P_{3}(z) = [2(z + 1)]3 - 5[4(z + 1)^{2}] + 17[2(z + 1)] - 3$$
$$= 8(z^{3} + 3z^{2} + 3z + 1) - 20(z^{2} + 2z + 1) + 34(z + 1) - 3$$
$$= 8z^{3} + 4z_{2} + 18z + 19, \ -1 \le z \le 1$$
$$= 8\left[\frac{1}{4}(3T_{1} + T_{3})\right] + 4\left[(T_{0} + T_{2})\right] + 18[T_{1}] + 19[T_{0}],$$
expressing each power of z in terms o Chebyshe

polynomials

= 21 T₀ + 24T₁ + 2T₂ + 2T₃, where
$$-1 \le z \le 1$$

Now truncating this polynomial at T_2 , we have

$$= \max_{-1 \le z \le 1} |P_{3}(z) - (21T_{0} + 24T_{1} + 2T_{2})|$$

=
$$\max_{-1 \le z \le 1} |2T_{3}|, \text{ where } T_{3}(z) = 4z^{3} - 3z$$

=
$$2 = \min_{-1 \le z \le 1} |P_{3}(z) - (21T_{0} + 24T_{1} + 2T_{2})|$$

Hence the required approximation is

 $P_2(z) = 21 \text{ To } (z) = 24 \text{ T}_1(z) + 2 \text{ T}_2(z)$ = 21(1) + 24(z) + 2(2z² - 1)... or P_2(z) = 4z² + 24z + 19, ... (iii)

for which the maximum absolute error δ = 2 is as small as possible.

Now from (ii) we have z = (x - 2)/2

Substituting this value in (iii) we have

$$P_2(x) = 4[(x-2)^2/4] + 24[(x-2)/2] + 19$$
$$= (x^2 - 4x + 4) + 12(x-2) + 19$$

or $P_2(x) = x^2 + 8x - 1$

Also we find that $|P_{_3}(x) - P_{_2}(x)|$

$$= \left| \left(x^3 - 5x^2 + 17x - 3 \right) - \left(x^2 + 8x - 1 \right) \right|$$
$$= \left| x^3 - 6x^2 9x - 2 \right| = \delta = 2$$

for x = 0, 1, 3 and 4

53.(1,2,3) First we consider vectors $u_1 u_2 ... u_n$ is \Box^n form an orthonormal set if they are unit vectors and are orthogonal to each other where the dot product in \Box^n is defined by $(a_1 a_2 a_n) .(b_1 b_2 b_n) = a_1 \overline{b_1} + a_2 \overline{b} + ... a_n \overline{p_n}$

Suppose A is unitary and R_1, R_2, R_n are its rows then $\overline{R_1}^{T}, \overline{R_2}^{T}, \dots, \overline{R_n}^{T}$ are the columns of

AH Let AA^{H} + [c_{jj}] by matrix multiplication c $c_{ij} = R_i \overline{R}^{T}_{J} = R_i R_j$

Since A is unitary we have AAH = I

A is orthogonal also multiplying A and A and setting each entry C_{ij} equal to the corresponding entry in I yields the following n² equations

$$R_i \cdot R_1 = 1$$
 $R_2 \cdot R_1 = 1 \dots R_n \cdot R_n = 1$

and R_i . $R_i = 0$ for $i \neq j$

Thus the rows of A are unit vectors and are orthogonal to each other

Hence they form an orthonormal set of vector

The condition $A^{T}A = I$ shows that the columns of A also form an orthonormal set of vectors

If we take vectors in \square^n then only orthonormal vectors can follows the above process they may not unitary.

54.(1, 2) The given differential equation is

$$\left[\frac{d}{dx}\left(x\frac{d}{dx}\right) - \frac{n^2}{x}\right]u = 0$$

with the boundary conditions u(0) = 0 and u(1) = 0

... (1)

.... (2, 3)

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

.... (4)

.... (5)

Comparing the equation (1) with the operator

$$\left[\frac{d}{dx}\left(p\frac{d}{dx}\right)+q\right],$$

 $p(x) = x \ p(\xi) = \xi$

we have

 \Rightarrow

 $x^2 \frac{d^2 u}{dx^2} + x \frac{du}{dx} - n^2 u = 0$

The general solution of the equation (5) is given by

$$u(x) = Ax^{n} + Bx^{-n} \qquad \dots (6)$$

The functions $u_1(x) = x_n$ and $u_2(x) = (\overline{x^n}^{-x})$ are, respectively, linearly independent solutions of the equation (5) the satisfy the conditions u(0) = 0 and u(1) = 0 The Wronskian of $u_1(x)$ and $u_2(x)$ is given by

$$W[u_{1}(x), u_{2}(x)] = \begin{vmatrix} u_{1}(x) & u_{2}(x) \\ u_{1}'(x) & u_{2}'(x) \end{vmatrix} = \begin{vmatrix} x^{n} & \frac{1}{x^{n}} - xn \\ nx^{n-1} & -\frac{n}{x^{n+1}} - nx^{n-1} \end{vmatrix} = -\frac{2n}{x} \neq 0,$$

which shows that $u_1(x)$ and $u_2(x)$ are two linearly independent solutions.

We know than the Green's function $G(x, \xi)$ is given by

 $-\frac{1}{C}u_{1}(x)u_{2}(\xi),$ $x < \xi$ $G(x, \xi) = \frac{-\frac{1}{C}}{u1(\xi)}u_{2}(x), x > \xi$ where C is given by the Abel's formula $\frac{C}{a(x)}$

$$u_1(x)u_2'(x) - u'_1(x)u_2(\xi) =$$
 $p(\zeta)$ (7)

where
$$u_1(\xi) = \xi_n$$
 and $u_2(\xi) = \frac{1}{\xi^n} - \xi^n$

Toll Free : 1800-2000-092 Email : info@vpmclasses.com Portal :examprep.vpmclasses.com

Online Test : onlinetest.vpmclasses.com

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

Substituting the value of $u_1(\xi)$, $u_2(\xi)$, we have

The Green's function $G(x, \xi)$ becomes

$$G\left(x,\xi\right) = \frac{\displaystyle\frac{x^{n}}{2n\xi^{n}}\left(1-\xi^{2n}\right), x < \xi}{\displaystyle\frac{\xi^{n}}{2n\ x^{n}}\left(1-x^{2n}\right), x > \xi}$$

55.(1,3) Let F =
$$y^{i2} - y^2 + 2xy$$

 $\frac{\partial F}{\partial y} = -2y + 2x$
d (∂F)

$$\frac{\mathrm{d}}{\mathrm{d}x}\left(\frac{\partial \mathsf{F}}{\partial \mathsf{y}'}\right) = 2\mathsf{y}$$

Euler's equation
$$\frac{\partial F}{\partial y'} - \frac{d}{dx} \left(\frac{\partial F}{\partial y'} \right) = 0$$

becomes -2y + 2x - 2y'' = 0

$$y'' + y = x$$

 $C.F. = c_1 cosx + c_2 sinx$

$$PI = \frac{1}{D^2 + 1}x = x$$

Thus $y = c_1 \cos x + c_2 \sin x + x$

using boundary conditions

$$x = 0 \qquad y = 0 \qquad c_1 = 0$$

$$x = \frac{\pi}{2} \qquad y = 0 \qquad \Rightarrow \qquad c_2 = -\frac{\pi}{2}$$

$$y = x - \frac{\pi}{2} \sin x$$
56.(2) Let
$$I_n = \int_a^x (x-t)^{n-1} f(t) dt$$

...(1)

L

where n is a positive integer and a is a constant.

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

Differentiating both sides with respect to x,

we get

$$\begin{aligned} \frac{dI_n}{dx} &= \int_a^x \frac{\partial}{\partial x} (x-t)^{n-1} f(t) dt + [(x-t)^{n-1} f(t)]_{t=x} \cdot 1 - [(x-t)^{n-1} f(t)]_{t=a} \cdot 0 \\ &= \int_a^x (n-1) (x-t)^{n-2} f(t) dt \\ &= (n-1) I_{n-1}(x) & ...(2) \end{aligned}$$
Differentiating (2) with respect to x
$$\begin{aligned} \frac{d^2I_n}{dx^2} &= (n-1) \frac{d}{dx} [I_{n-1},(x)] \\ &= (n-1) (n-2)I_{n-2}, & [using (1)] \end{aligned}$$
Proceeding in this way, we get,
$$\begin{aligned} \frac{d^2I_n}{dx^{n-1}} &= (n-1) (n-2)...1, \quad \dot{I}_1(x) \\ &= (n-1)! I_1(x) \end{aligned}$$
Now taking n = 1 in (1), we get
$$I_1 &= \int_a^x f(t) dt = \int_a^x f(x_1) dx_1, & ...(3) \end{aligned}$$
Putting x = a in (1), we obtain
$$I_n(1) = 0 \text{ for all } n \end{aligned}$$
Taking n = 2 in (2), we get
$$\begin{aligned} \frac{dI_2}{dx} &= I_1(x) \\ \therefore \quad I_2 &= \int_a^x \int_a^{x_1} f(x_1) dx_2 &(4) \end{aligned}$$
Putting n = 3 in (2), we have
$$\begin{aligned} \text{Toll Free: 1800-2000-092} \end{aligned}$$

union of measurable

L

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

Let
$$h_1(x) = \prod_{n=1}^{n} f_n(x)$$

then
$$\{x : h_1(x) < \alpha\} = \bigcup_{i=1}^{\infty} \{x : f_i(x) < \alpha\}$$

Since $f_i(x)$ are measurable the union of measurable function is also measurable so h_1 is measurable.

For $n \in I$ let

$$g_n(x) = l.u.b. \{f_n(x), f_{n+1}(x), f_{n+2}(x), \ldots\} \ (a \le x \le b).$$

Then, solution of each gn is a measurable function, Moreover,

$$\lim_{n\to\infty} \quad (a \le x \le b).$$

Also, for any $x \in [a, b]$,

$$g_{_{1}}\left(x\right) \geq g_{_{2}}\left(x\right) \geq g_{_{3}}\left(x\right) \geq \ldots .$$

Hence, if $s \in R$,

$$\left\{ x \mid f^{*}(x) < s \right\} = \bigcup_{n=1}^{\infty} \left\{ x \mid g_{n}(x) < s \right\}.$$

It follows that f* is measurable.

That f_* is measurable may be proved similarly. Finally, if $\{f_n\}_{n=1}^{\infty}$ converges pointwise to f, then f = $f^* = f_*$ and so f is measurable.

Let E be the set of x in [a, b] at which the statement.

 $\lim_{n\to\infty}f_n(x) = (x)$

does not hold. Then, by hypothesis, E has measure zero. Define the functions $\boldsymbol{g}_n (n \in \boldsymbol{I})$ and \boldsymbol{g}

as follows :

$$\begin{split} g_n(x) &= f_n(x) \quad \begin{pmatrix} x \not\in E \end{pmatrix}; & g(x) &= f(x) & \begin{pmatrix} x \not\in E \end{pmatrix} \\ g_n(x) &= 0 & (x \in E) & g(x) &= 0 & (x \in E). \end{split}$$

Then each g_n is measurable, Now, if $x \in E$, then

Toll Free : 1800-2000-092 Email : info@vpmclasses.com Portal :examprep.vpmclasses.com

Online Test : onlinetest.vpmclasses.com

SCIENCE | ENGINEERING | COMMERCE | ARTS IIT JAM, CSIR NET, GATE, UGC NET, SLET, TIFR, NIMCET, JEST, BHU, JNU, ISM etc.

$$\lim_{n\to\infty} g_n(x) = 0 = g(x).$$

Also, if $x \notin E$, then

$$\lim_{n\to\infty}g_{n}(x)=\lim_{n\to\infty}f_{n}(x)=f(x)=g(x).$$

Hence $\{g_n\}_{n=1}^{\infty}$ converges pointwise (everywhere) to g on [a, b]. Since each g_n is measurable,

thus g is measurable.

58.(1,2,3,4) Let x be a point of continuity of $F_X(x)$. Let x > 0. We have,

$$\begin{split} \mathsf{FX}_{\mathsf{n}}(\mathsf{x}) &= \mathsf{P}\big[\mathsf{X}_{\mathsf{n}} \leq \mathsf{x}\big] \\ &= \mathsf{P}\Big|\big\{\mathsf{X}_{\mathsf{n}} \leq \mathsf{x}\big\} \cap \big\{|\mathsf{X}_{\mathsf{n}} - \mathsf{X}| < \varepsilon\big\}\Big| + \mathsf{P}\Big[\big\{\mathsf{X}_{\mathsf{n}} \leq \mathsf{x}\big\} \cap \big\{|\mathsf{X}_{\mathsf{n}} - \mathsf{X}| \geq \varepsilon\big\}\Big] \\ &\leq \mathsf{P}\big[\mathsf{X} \leq \mathsf{x} + \varepsilon\big] + \mathsf{P}\big[\big|\mathsf{X}_{\mathsf{n}} - \mathsf{X}\big| \geq \varepsilon\big]. \end{split}$$

Based on the inequality and the fact that $X_n \xrightarrow{P} X$, we see that

$$\overline{\lim_{n \to \infty}} F_{x_n}(x) \le F_x(x + \varepsilon). \qquad \dots (1)$$

To get a lower bounded, we proceed similarly with the complement to show that

$$\mathsf{P}\!\left[X_{n} > x\right] \!\leq\! \mathsf{P}\!\left[X \geq x \!-\! \epsilon\right] \!+\! \mathsf{P}\!\left[\left|X_{n} - X\right| \geq \epsilon\right]\!.$$

Hence,

$$\underbrace{\lim_{n \to \infty}}_{n \to \infty} F_{x_n}(x) \ge F_x(x - \varepsilon).$$
.... (2)

Using a relationship between $\overline{\lim}$ and $\underline{\lim}$, it follows from (1) and (2) that

$$F_{x}\left(x-\epsilon\right)\leq \varinjlim_{n\to\infty}F_{xn}\left(x\right)\leq \varlimsup_{n\to\infty}F_{xn}\left(x\right)\leq F_{x}\left(x+\epsilon\right).$$

Letting $\in \rightarrow 0$ gives us the desired result.

Let \in > 0 be given. Then,

$$\lim_{n\to\infty}P\Big[\big|X_n-b\big|\leq \varepsilon\Big]=-\lim_{n\to\infty}F_{X_n}\left(b+\varepsilon\right)-\lim_{n\to\infty}F_{Xn}\left(b-\varepsilon-0\right)=1-0=1,$$

which is the desired result.

Suppose X_n converges to X in distribution and Y_n converges in probability to 0. Then $X_n + Y_n$
